

Macrosoft's Code of Coding Conduct

Team Members:
Austin Johnston
Isaiah Grant
Alex Staeheli
Andrey Melnikov

Each member of Macrosoft's staff must do each of the following:

- Curly brackets starting a class, method, or loop must be on the line below the declaration.
- There must be at least 1 line of whitespace above and below any while or for loop blocks.
- There must be at least 2 lines above and below each method blocks of code.
- Naming conventions for methods and variables will follow those standard to Java.
- Variable names must be clear and it not commented to describe the variable's purpose or function.
- There must be a comment above each method with a description of it's uses or purpose.
- No repeated blocks of code unless absolutely necessary, use methods instead.
